

Animate Slide Content and Images

While in Normal view, click on the image or text box that you wish to animate.

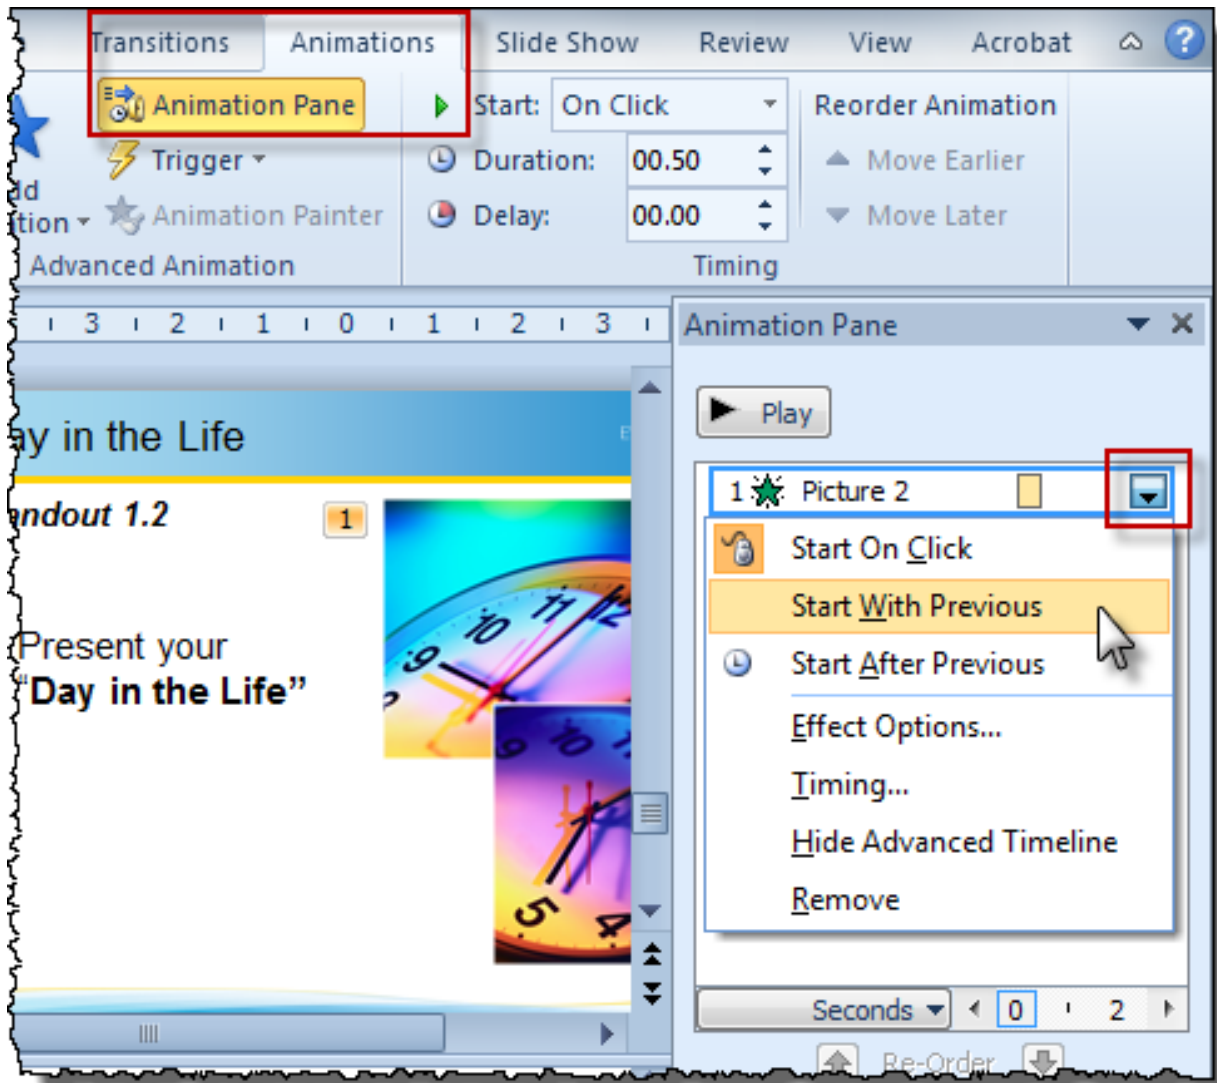

Click on the Animations tab, then click **Add Animation** to see a drop-down menu of different animation effects.

Select the animation effect you desire. If you don't see the effect what you want, click the appropriate **More...Effects** option at the bottom of the drop-down menu. A number will appear next to the object you animated, indicating where the animation will occur in the animation sequence.

To change this order or any of the properties of this animation, click on **Animation Pane** in the Animations ribbon. A list of all animations shown on this slide will appear to the right of the slide.

Click the down arrow to the right of the animation indicator to reveal the properties window. Modify the animation as you wish. You can change the order of multiple animation effects by clicking on an effect and then clicking the re-order buttons at the bottom or simply click and drag it in the list.
